

SEMINAR TITLE

'TECNAFLEX FLAT ROOFING THE WAY FORWARD'

Duration - 45 minutes

Subject Covered - Flat Roofing

Contents

The seminar covers failures on existing flat roofing systems, how and why they occur. It goes on to explain how GRP has been used in the industry over the last 40 years. It further covers development of GRP flat roofing by the unique Tecnaflex floating roof design which has a world wide patent.

The seminar continues with a number of case studies with various aspects of flat roofing being covered and ends with a 'questions and answers' session.

The seminar also covers the training and contractor network, as well as guarantees relating to the system.

Supporting Literature

All attendees of the seminar will receive supporting literature covering the points raised as well as case studies and relevant information relating to the **Tecnaflex Flat Roofing System**.

All attendees will also receive a certificate of attendance relating to this seminar.

Venues

The seminar can be held in-house.

Requirements for the Seminar

One 240 volt, 13 amp plug socket.

Availability

Notice will be required to book seminars. The seminars can be carried out within or outside of working hours as required. Please note that demand is such that at least two months notice will be required for seminar bookings.
